TRANSMITTAL OF SUPPLEMENTAL INFORMATION DISCLOSURE STATEMENT
BEFORE MAILING OF EITHER A FINAL ACTION
OR NOTICE OF ALLOWANCE (37 CFR § 1.97(c))

1600 ODS Tower
601 S.W. Second Avenue
Portland, Oregon 97204-3157
August 18, 2005

Commissioner for Patents
P.O. Box 1450
Alexandria, VA 22313-1450

Dear Sir:

The Supplemental Information Disclosure Statement submitted herewith is being filed after three months of the filing date of this national application or the date of entry of the national stage, as set forth in §2.492, of the international application, or after the mailing date of a first Office Action on the merits, which ever occurred last, but before the mailing date of either:

- (1) a final action under §1.113 or
- (2) a notice of allowance under §1.311

Accompanying this transmittal is:

☐ a statement as specified in 37 CFR §1.97(e).

08/23/2005 JBALINAN 00000015 10791589

01 FC:1806

180.00 DP

OR

X the fee as set forth in 37 CFR §1.17(p) for submission of an
Information Disclosure Statement under §1.97(c).

In accordance with 37 CFR §1.97(h), the filing of this Information Disclosure Statement will not be regarded as an admission that any patent or publication or combination of patents referred to herein is, or is considered to be, material to patentability under 37 CFR §1.56(b) unless specifically designated as such.

A list of the United States patents and other items disclosed herewith is set forth on the attached two pages of Form PTO/SB/O8. In accordance with 37 CFR §1.98 (a)(2)(i) , copies of such U.S. patent references are not enclosed with this submission. Copies of nonpatent items disclosed herewith are enclosed.

The relevance of items FN, FO, and FP is explained as follows:

FN The Pocket Gardener is a bypass pruner with folding channel-type handles. Each handle includes a metal channel, with a plastic channel surrounding the metal portion and attached to it by the pivot bolts at each end of each handle, and soft rubber-like material is molded over the plastic. The plastic does not cover the edges, or margins, of the metal channel, and the rubber-like cushioning material does not cover the margins or edges of the relatively hard plastic material where cushioning would be most desirable by a person gripping the handles to squeeze them together during use of the pruning shear. A blade latch is made of sheet metal mounted on a pivot pin mounted in the tang of the sharp blade and arranged to engage a shoulder defined by the back of the jaw member. The latch is urged into engagement to keep the blades closed by engaging the inside of the handle attached to the sharpened blade when the handles are folded with respect to the blade and jaw and squeezed together, and the latch remains engaged when the handles are thereafter unfolded toward the extended position with respect to the

jaw and sharpened blade. A coil spring extends between the base of the jaw and the tang of the blade to push the jaw and blade open when they are not latched closed. An interference fit between the metal channel base and a protruding part of the base of the blade and tang of the jaw retains the handles in their extended positions.

FO Remington. A pair of scissors has handles that fold with respect to each blade, with the handles being similar to those disclosed in McIntosh, et al., U.S. Patent No. 5,697,114. A pivoted latch body of sheet metal is pinned to the tang of one scissors blade and is movable to engage a shoulder defined on the other blade, to keep the scissors closed against the force of a coil spring extending between the tangs of the pivoted blades.

FP Rumford. A bypass blade pruning shear with handles in the form of a channels that fold with respect to the shear. The handles consist of a steel channel member covered on its sides and back by a molded hard plastic shell that extends along the sides of the steel channel, extending barely past the edges, or margins, of the channel sides, but without overlapping or covering those edges, or margins. A simple lock finger is pivoted on a pin fitted in the tang of the sharp edged blade and can be moved to engage a shoulder on the outside of the support jaw to keep the pruner blades closed. Side pressure on the channel side walls provides friction to keep the handles extended or folded about the blades. A coil spring is mounted between the base of the support jaw and the tang of the sharp edged blade.

In accordance with 37 CFR §1.97(h), the filing of this Information Disclosure Statement will not be regarded as an admission that any reference or combination of references referred to herein is, or is considered to be, material to patentability under 37 CFR §1.56(b) unless specifically designated as such.

The person making this statement is the attorney who signs below on the basis of the information supplied by the inventor and the information in his file.

Respectfully submitted,

A handwritten signature in black ink, appearing to read "Donald B. Haslett", with a long horizontal flourish extending to the right.
